

Prateek Mishra

Software Engineer (SDET) | ASP.NET Core • React • Playwright • AI-Powered Test Automation

Bengaluru, India | +91 8961455765 | mprateek058@gmail.com

LinkedIn | GitHub | PratsPilot | Automation PM

Professional Summary

Software Engineer with 1+ years of experience designing, developing, and testing enterprise applications using ASP.NET Core, React, Playwright, Selenium, and modern automation frameworks. Skilled in backend development, REST APIs, RESTful API development, enterprise test automation, and AI-powered automation for HP applications.

Technical Skills

Languages	C#, Java, Python, JavaScript, TypeScript, SQL
Backend	ASP.NET Core (.NET 10), Entity Framework Core, REST APIs, RESTful API Development, JWT Authentication, Dependency Injection, Repository Pattern, Unit of Work
Frontend	React, TypeScript, Material UI, Tailwind CSS, HTML5, CSS3
Automation	Playwright, Selenium WebDriver, Pytest, Postman, REST API Testing, API Validation, Page Object Model (POM)
Databases	PostgreSQL, SQL Server, MongoDB
DevOps	Azure DevOps, Git, GitHub, GitHub Actions, Docker, CI/CD, Render, Vercel
Concepts	Clean Architecture, Object-Oriented Programming, Agile/Scrum, Software Development Life Cycle (SDLC), Integration Testing, Regression Testing

Professional Experience

Associate Engineer	Jul 2025 – Present
Ascension Engineering Pvt. Ltd., Bengaluru, India	
Client: HP Inc.	

Enterprise AI Automation (QAMA Framework)

- Enhanced HP’s AI-driven QAMA framework by implementing workflow improvements for enterprise test generation.
- Built AI-driven orchestration workflows supporting automated test generation across 53+ Android modules using TestRail, GitHub metadata, and similarity matching.
- Implemented automation components responsible for generating Page Object classes, test scripts, and workflow templates across 53+ Android application modules.
- Refined similarity-based matching to enhance AI-driven enterprise test generation.
- Optimized workflow validation to improve automation reliability and reduce manual effort.

Backend Development (.NET + React)

- Contributed to the development of an internal engineering dashboard using ASP.NET Core and React for monitoring enterprise automation execution.
- Implemented backend service-layer logic and REST APIs supporting enterprise automation dashboards used across multiple HP automation projects.
- Integrated ASP.NET Core backend services with React components, enabling enterprise automation dashboards across 2+ HP automation projects.
- Participated in Git-based development, peer code reviews, and Azure DevOps release pipelines.

Web Automation (Playwright)

- Maintained and expanded 350+ Playwright (TypeScript) test cases for HP PrintOS enterprise applications.
- Created reusable Page Object Model (POM) components for scalable end-to-end automation.
- Investigated automation failures using Playwright traces, execution logs, and API responses to improve test stability.
- Performed REST API validation using Postman to verify backend responses supporting automated UI workflows.

Android Automation (Python, Selenium, Pytest)

- Developed Android automation scripts supporting 53+ enterprise printer workflows using Python, Selenium, and Pytest.
- Established the Add Printer automation flow as the reference implementation for future Android automation scenarios within the project.
- Increased automation stability through reusable utilities, common functions, and modular framework enhancements.

Windows Automation & Engineering Collaboration

- Tested Windows desktop workflows for enterprise printer applications and verified functional scenarios.
- Collaborated with developers and QA teams using Git, Azure DevOps, TestRail, and Postman in Agile/Scrum environments.

Projects

PratsPilot – Agentic AI Platform Live Demo | GitHub | LinkedIn Post

ASP.NET Core, React, PostgreSQL, Entity Framework Core, JWT, Docker, OpenRouter, Groq

- Architected a full-stack agentic AI platform enabling users to create, configure, and execute AI agents, workflows, and custom tools through an intuitive web interface.
- Applied Clean Architecture with Repository Pattern, Unit of Work, and Dependency Injection to build a scalable and maintainable backend.
- Secured user access using JWT access tokens, refresh tokens, and role-based authorization.
- Integrated background job processing for asynchronous workflow execution and long-running AI tasks.
- Designed a provider abstraction layer integrating Groq and OpenRouter for dynamic AI model selection.
- Designed an extensible workflow engine supporting AI agents, tools, and multi-step automation.
- Created a Python tool framework enabling execution of custom scripts within AI workflows.
- Deployed the platform supporting 100+ users using Docker-based production infrastructure.

Automation PM – Enterprise Automation Practice Platform Live Demo | GitHub

ASP.NET Core, React, PostgreSQL, Playwright, Docker, GitHub Actions

- Architected a full-stack enterprise automation management platform for practicing modern automation engineering concepts.
- Built responsive dashboards for managing automation assets, execution status, and project workflows through an intuitive user interface.
- Engineered REST APIs and backend services for project management, user authentication, and automation workflow handling.
- Added 64+ Playwright automated test scenarios covering critical business workflows.
- Configured Docker deployments and GitHub Actions CI/CD pipelines.

Education

Vellore Institute of Technology (VIT), Vellore 2021 – 2025

B.Tech in Information Technology | CGPA: 8.53/10

DMA Public School, Rampur 2020 – 2021

Class XII (CBSE) | 85%

PMS Public School, Moradabad 2018 – 2019

Class X (CBSE) | 87.2%

Certifications

- Ultimate ASP.NET Core Web API Development Guide (Udemy)
- Playwright: Web Automation Testing From Zero to Hero (Udemy)
- The Complete Full-Stack Web Development Bootcamp (Udemy)

Professional Highlights

- Delivered automation solutions across Web, Android, and Windows platforms using Playwright, Selenium, and Pytest.
- Built and deployed two production-ready ASP.NET Core and React applications.
- Maintained and expanded 350+ Playwright test cases for HP PrintOS enterprise applications.
- Enabled AI-powered test generation across 53+ Android application modules.
- Launched the PratsPilot platform for 100+ users using Docker-based production infrastructure.
